

UAA Professional Development Seminar Series

Presented by Masoumeh Kapourchali,
PhD., Postdoc Fellow, Johns Hopkins
University

As the price of data-collecting devices continues to fall, larger volumes of data become available for use. It is imperative for intelligent systems to uncover important information from such high dimensional, spatio-temporal and noisy data. Classical computational paradigms have made impressive progress, but they are still far beyond of the h5(r)-10(oBT1(.)17(g)-8)aiasl od scien-2-11(.)6)-
